Laboratories Introduction

SIEMIC, headquartered in the heart of Silicon Valley, with superior facilities in US and Asia, is one of the leading independent testing and certification facilities providing customers with one-stop shop services for Compliance Testing and Global Certifications.

In addition to testing and certification, SIEMIC provides initial design reviews and compliance management throughout a project. Our extensive experience with China, Asia Pacific, North America, European, and International compliance requirements, assures the fastest, most cost effective way to attain regulatory compliance for the global markets.

Accreditations for Conformity Assessment

4. Equipment under Test (EUT) Information

Description of EUT: GSM Digital Mobile Phone

Main Model: RG129

Serial Model: N/A

Date EUT received: July 20, 2017

Test Date(s): July 21 to August 23, 2017

Equipment Category : PCE

GSM850: -2.02dBi

Antenna Gain: PCS1900: -0.11dBi

Bluetooth: -2.12dBi

GSM: PIFA antenna Antenna Type:

BT: Monopole antenna

GSM / GPRS: GMSK Type of Modulation:

Bluetooth: GFSK

GSM850 TX: 824.2 ~ 848.8 MHz; RX: 869.2 ~ 893.8 MHz

RF Operating Frequency (ies): PCS1900 TX: 1850.2 ~ 1909.8 MHz; RX: 1930.2 ~ 1989.8 MHz

Bluetooth: 2402-2480 MHz

GSM Vioce:GSM850: 32.82dBm

Maximum Conducted PCS1900: 30.24 dBm

AV Power to Antenna: GPRS:GSM850: 32.87dBm

PCS1900: 30.30dBm

GSM Vioce:GSM850: 28.62dBm / ERP

PCS1900: 30.14dBm / EIRP

ERP/EIRP: GPRS:GSM850: 28.67dBm / ERP

PCS1900: 30.20 dBm / EIRP

| Test Report | 17070605-FCC-R1 |
|-------------|-----------------|
| Page | 7 of 55 |

GSM 850: 124CH

Number of Channels: PCS1900: 299CH

Bluetooth: 79CH

Port: USB Port, Earphone Port

Adapter:

Model: STC-A22O501500USBA-Z

Input: AC100-240V~50/60Hz,200mA

Output: DC 5.0V,500mA

Input Power:

Battery

Model: BL100EI (ICP5/34/53) Spec: 3.7V/800mAh(2.96Wh)

Limited charge voltage: 4.2V

Trade Name : N/A

GPRS Multi-slot class 8/10/11/12

FCC ID: ZLE-RG129

| Page | 9 of 55 |

6. MEASUREMENTS, EXAMINATION AND DERIVED RESULTS

6.1 RF Exposure (SAR)

Test Result: Pass

The EUT is a portable device, thus requires SAR evaluation;

Please refer to RF Exposure Evaluation Report: 17070605-FCC-H.

|-----------------|--|------------------------|--|--|--|--|--|--|
| Spec | Item | Requirement Applicable | | | | | | |
| §22.913 (a) | a) | ERP:38.45dBm | | | | | | |
| §24.232 (c) | b) | EIRP:33dBm ✓ | | | | | | |
| Test Setup | | Base Station EUT | | | | | | |
| Test Procedure | For Conducted Power: The transmitter output port was connected to base station. Set EUT at maximum power through base station. Select lowest, middle, and highest channels for each band and different test mode. For ERP/EIRP: According with KDB 971168 v02r02 The transmitter was placed on a wooden turntable, and it was transmitting into a non-radiating load which was also placed on the turntable. The measurement antenna was placed at a distance of 3 meters from the EUT. During the tests, the antenna height and polarization as well as EUT azimuth were varied in order to identify the maximum level of emissions from the EUT. The test was performed by placing the EUT on 3-orthogonal axis. The frequency range up to tenth harmonic of the fundamental | | | | | | | |

Requirement(s):

According with KDB 971168 v02r02

5.7.2 Alternate procedure for PAPR

5.1.2 Peak power measurements with a peak power meter

Test Procedure The total peak output power may be measured using a broadband peak RF power meter. The power meter must have a video bandwidth that is greater than or equal to the emission bandwidth and utilize a fast-responding diode detector.

5.2.3 Average power measurement with average power meter

As an alternative to the use of a spectrum/signal analyzer or EMI receiver to perform a measurement of the total in-band average output power, a wideband RF average power meter with a thermocouple detector or equivalent can be used under certain conditions

If the EUT can be configured to transmit continuously (i.e., the burst duty

| Test Report | 17070605-FCC-R1 |
|-------------|-----------------|
| Page | 16 of 55 |

| | cycle ≥ 98%) and at all times the EUT is transmitting at is maximum output |
|--------|--|
| | power level, then a conventional wide-band RF power meter can be used. |
| | If the EUT cannot be configured to transmit continuously (i.e., the burst |
| | duty cycle < 98%), then there are two options for the use of an average |
| | power meter. First, a gated average power meter can be used to perform the |
| | measurement if the gating parameters can be adjusted such that the power is |
| | measured only over active transmission bursts at maximum output power |
| | levels. A conventional average power meter can also be used if the |
| | measured burst duty cycle is constant (i.e., duty cycle variations are less than |
| | ± 2 percent) by performing the measurement over the on/off burst cycles and |
| | then correcting (increasing) the measured level by a factor equal to |
| | 10log(1/duty cycle) |

6.6 Spurious Radiated Emissions

| Temperature | 22°C |
|----------------------|-----------------|
| Relative Humidity | 53% |
| Atmospheric Pressure | 1008mbar |
| Test date : | August 02, 2017 |
| Tested By : | Loren Luo |

| Requirement(s): | | | |
|----------------------------------|---|---|---|
| Spec | Item | Requirement | Applicable |
| §2.1053, §22.917 & §24.238 | a) | The power of any emission outside of the authorized operating frequency ranges must be attenuated below the transmitter power (P) by a factor of at least 43 + 10 log (P) dB. The spectrum is scanned from 30 MHz up to a frequency including its 10th harmonic. | ₹. |
| Test setup | Ant. Tower 1-4m Variable Support Units Ground Plane Test Receiver | | |
| Test Procedure | rad 2. The Dui var was 3. Rei cor of t Sai | e transmitter was placed on a wooden turntable, and it was transmitiating load which was also placed on the turntable. The measurement antenna was placed at a distance of 3 meters from the tests, the antenna height and polarization as well as EUT at ited in order to identify the maximum level of emissions from the EUs performed by placing the EUT on 3-orthogonal axis. The move the EUT and replace it with substitution antenna. A signal geometred to the substitution antenna by a non-radiating cable. The at the spurious emissions were measured by the substitution. The Field Strength = Raw Amplitude (dBµV/m) — Amplifier Gain (distor (dB) + Cable Loss (dB) + Filter Attenuation (dB, if used) | the EUT. azimuth were JT. The test nerator was bsolute levels |
